	Urgent	Not Urgent
Important	• Fine-tune a pretrained video/image model on GenVideo-100K • Backend endpoint that takes video frames and returns an “AI-generated” probability • Browser extension that captures frames from TikTok/Facebook videos as the user scrolls	• Extend to other platforms (YouTube, Instagram, ...) • A stronger model that generalizes to newer AI video generators • Evidence of why a video looks AI-generated (explainability for the black-box model)
Not Important	• Pretrained backbone: Hugging Face Transformers • Loading GenVideo-100K: Hugging Face datasets • Extracting frames from videos for training: OpenCV or decord • Running the API server: FastAPI	• Train from scratch • User accounts and passwords • Mobile app version
